

Direct/Offsite Renewables

Origis Clean Hydrogen projects leverage our expertise developing and sourcing the lowest cost renewable energy feedstock, optimized through our proprietary 'OASIS' platform, to deliver the most reliable and lowest cost clean hydrogen solution best matching your needs. Driving the lowest cost can include a mix of behind-the-meter onsite, offsite, or virtually contracted renewables and a cost-reducing grid-flexible electrolyzer design. Origis can deliver clean hydrogen in liquid or gas form, distributed directly at your site, or via third party distribution and storage providers.
