

Origis Energy Airport Solar Program

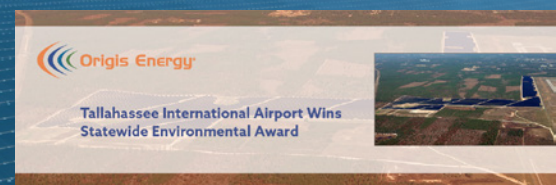

Add the Benefits of Solar to Your Airport without the Worry

Reap the benefits and avoid the pitfalls of solar at your airport. When you work with Origis Energy, you are working with an experienced clean energy team with a history of creating award-winning solar airport installations. Every step of the way, from permitting, financing, project construction, commissioning and operation, our team will handle the details. We will always be here to answer any questions or concerns you or your stakeholders might have.

Origis Energy developed and built the world's largest airport-based solar facility in coordination with the City of Tallahassee and Tallahassee International Airport in Florida.

Solar Benefits for Your Airport

The experienced Origis team will streamline the process to make it easy for you to benefit from solar.

Revenue

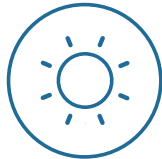

Turn underutilized land into revenue with an Origis Energy solar project.

Economic Development

Solar projects produce substantial economic benefits for the local economy during construction, including spending for consumable goods and providing jobs for local tradesman and laborers. A solar facility can also attract new business to the area.

Affordable Clean Energy

Solar delivers affordable clean energy generation that is a proven hedge against the volatility of fossil fuel sources.

County Benefits

Solar projects produce more in tax revenue than they use in services because a solar project does not require water, sewer facilities, schools or other infrastructure investments from the county. The resulting tax revenue can be used to help improve local infrastructure and/or pay for police, fire fighters, and other valuable community services.

Community Engagement

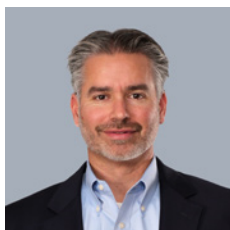

Origis seeks to understand and get to know the communities in which we develop projects—looking for ways to be a good neighbor and contribute to causes of local importance. As a long-term community partner we work hard to foster transparent communication, build trust and deliver all the benefits envisioned for the project.

Long Term Operations

Upon completion, Origis will manage and operate the project, with the operations team taking land stewardship very seriously. Origis is an environmentally sensitive operator and has developed a solar pollinator program to further benefit the land and local community.
